

# Module 3 – Assignment

1. Created autoscaling group and I used test server template.

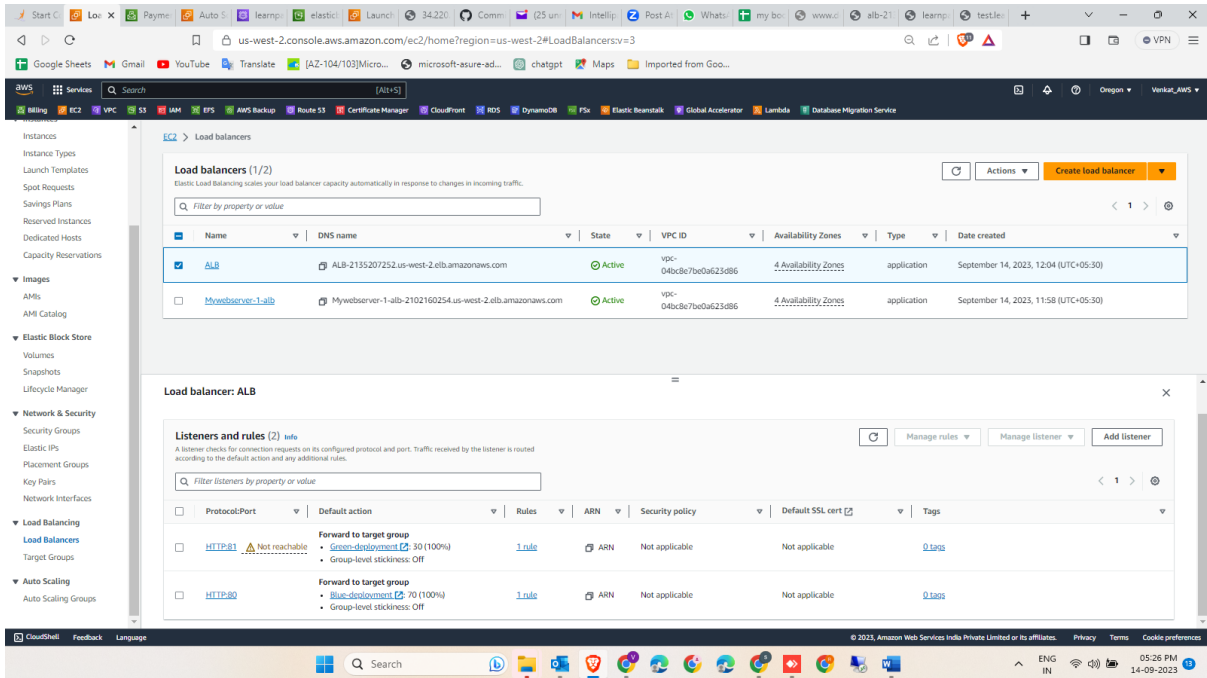

2. Created scaling policy which they mentioned in this part.

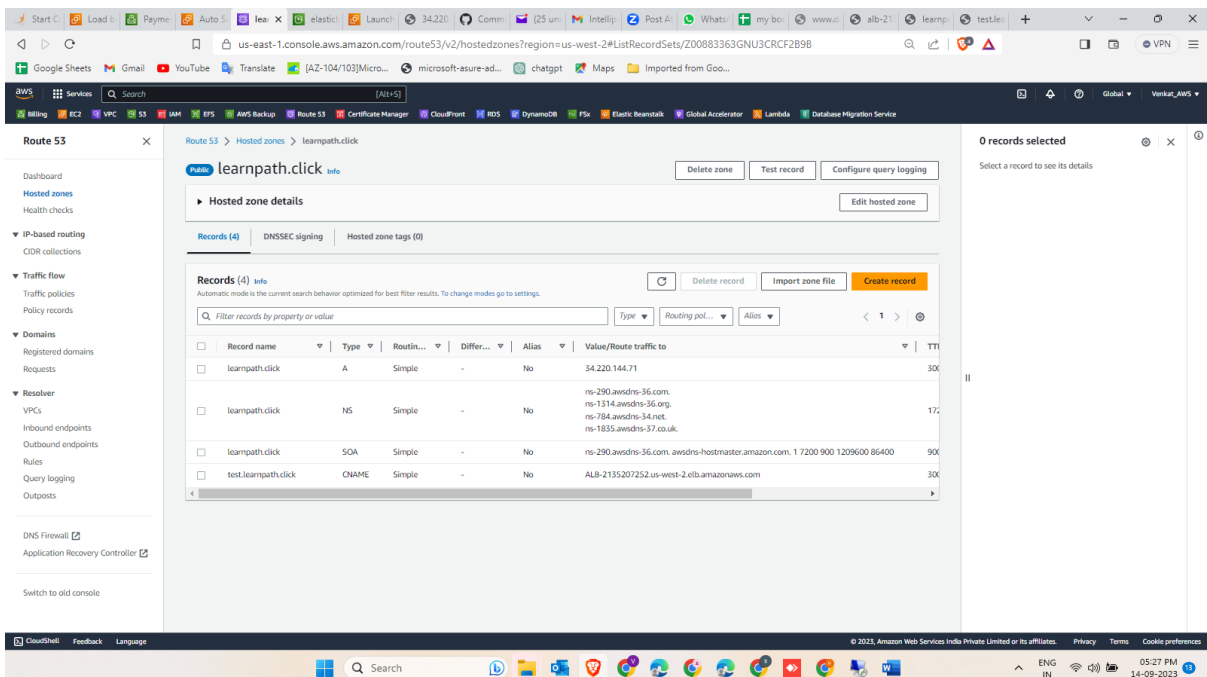

## Module 3 – Assignment

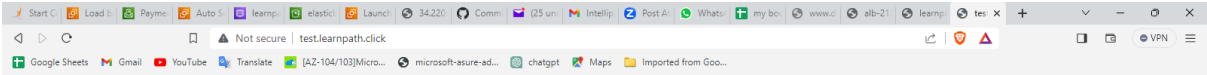

- Created an Application Load balancer to distribute the load between compute resources. In my two target groups, I made one for blue deployment and the other for Green deployment. I use weighted routing to route 70% of the traffic to the Blue target group and 30% of the traffic to the Green target group.

- Registered domain and routed traffic to the webserver.

# Module 3 – Assignment

**It works!**
