

1. RDS has been created.

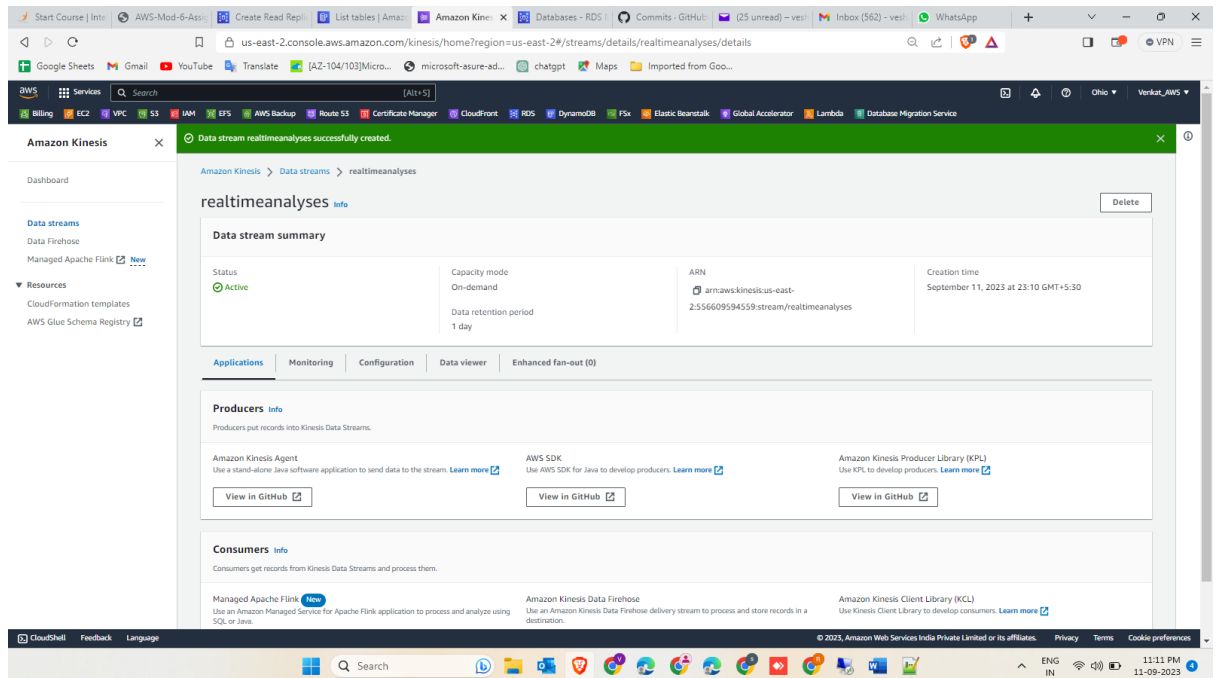

2. automated backups enabled for this database with a retention period of 2 days.

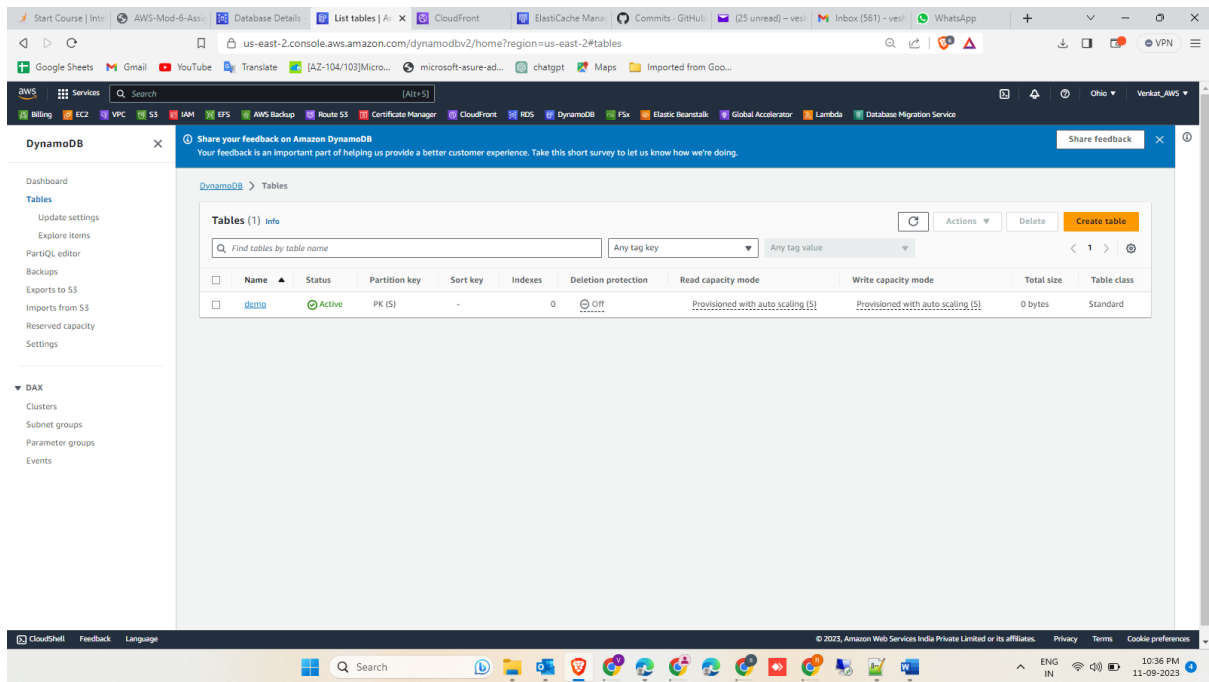

3. I replicated my DB instances so that I can read data from different region.

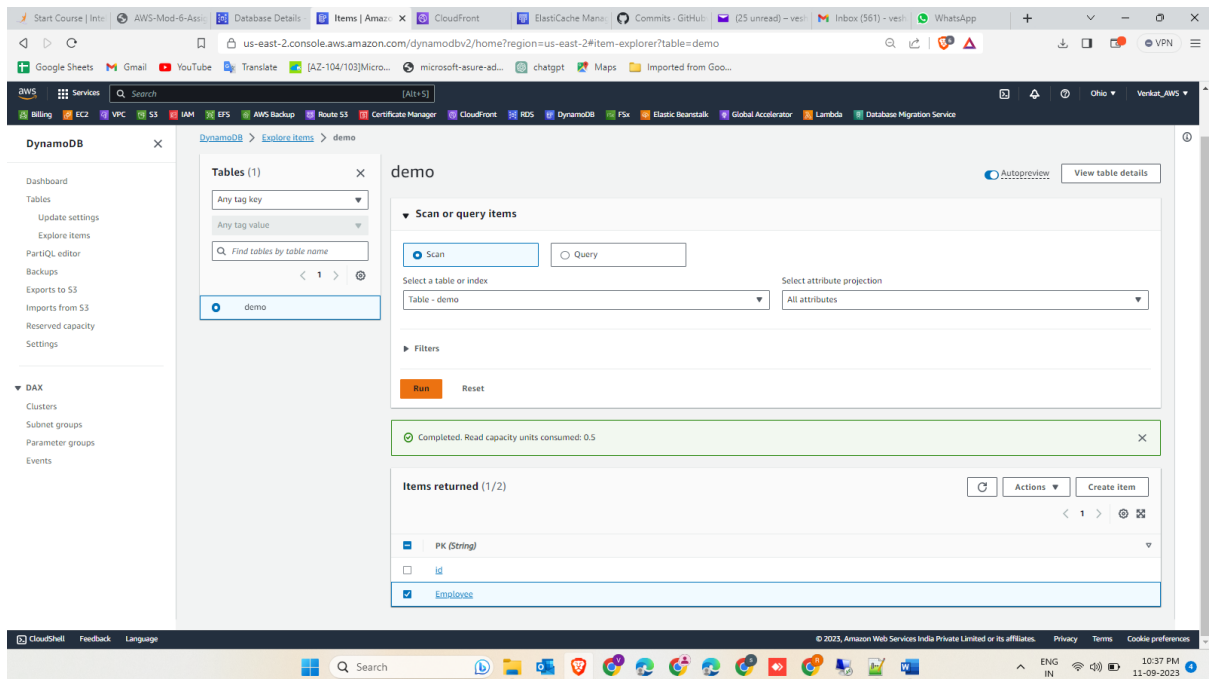

4. Deployed kinesis. This database can ingest data in real time and process it for analysis.

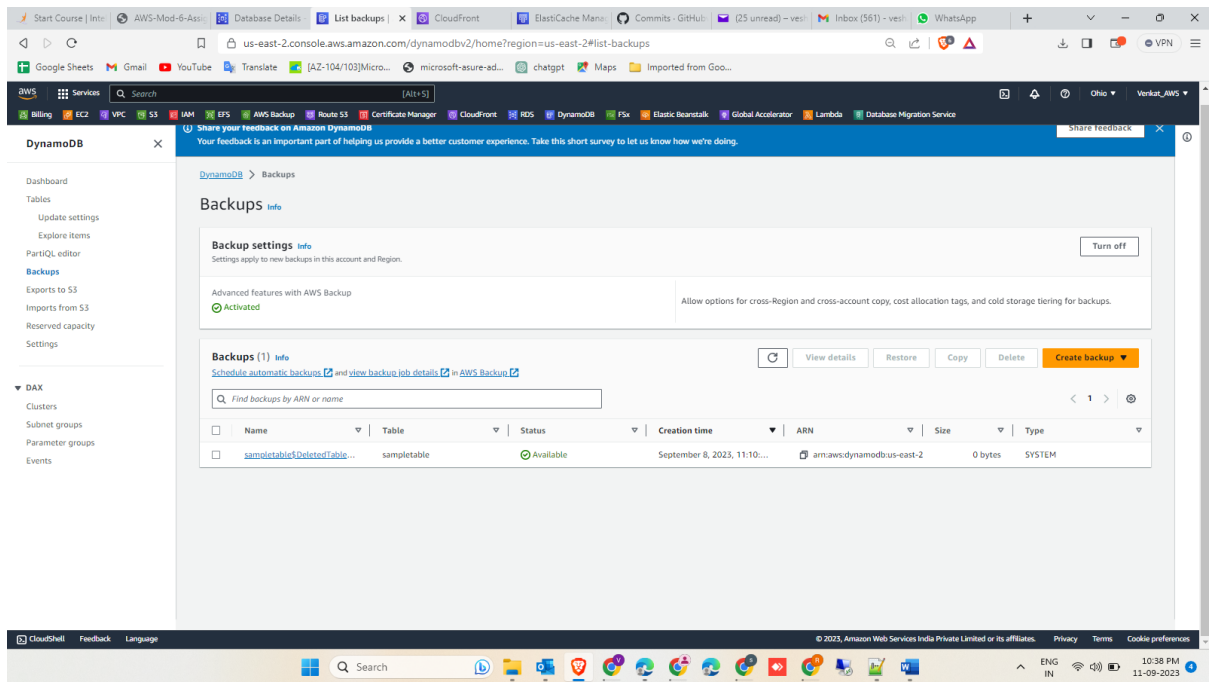

5. Created DynamoDB.

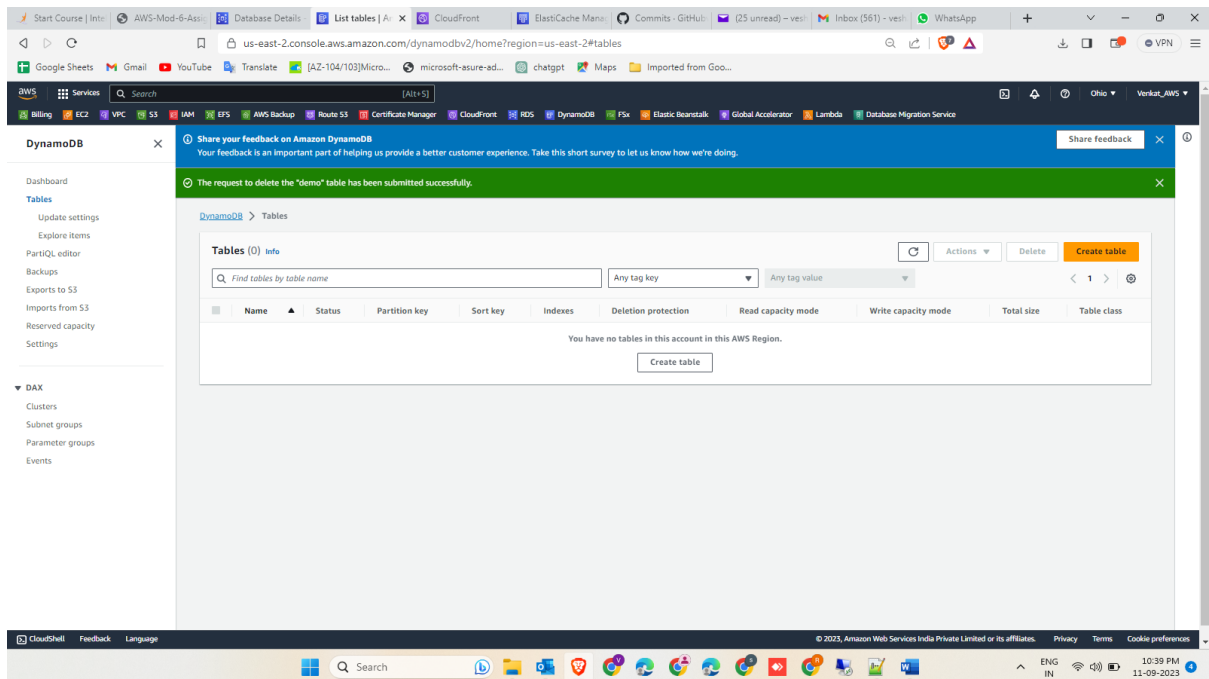

6. And just entered some sample data.

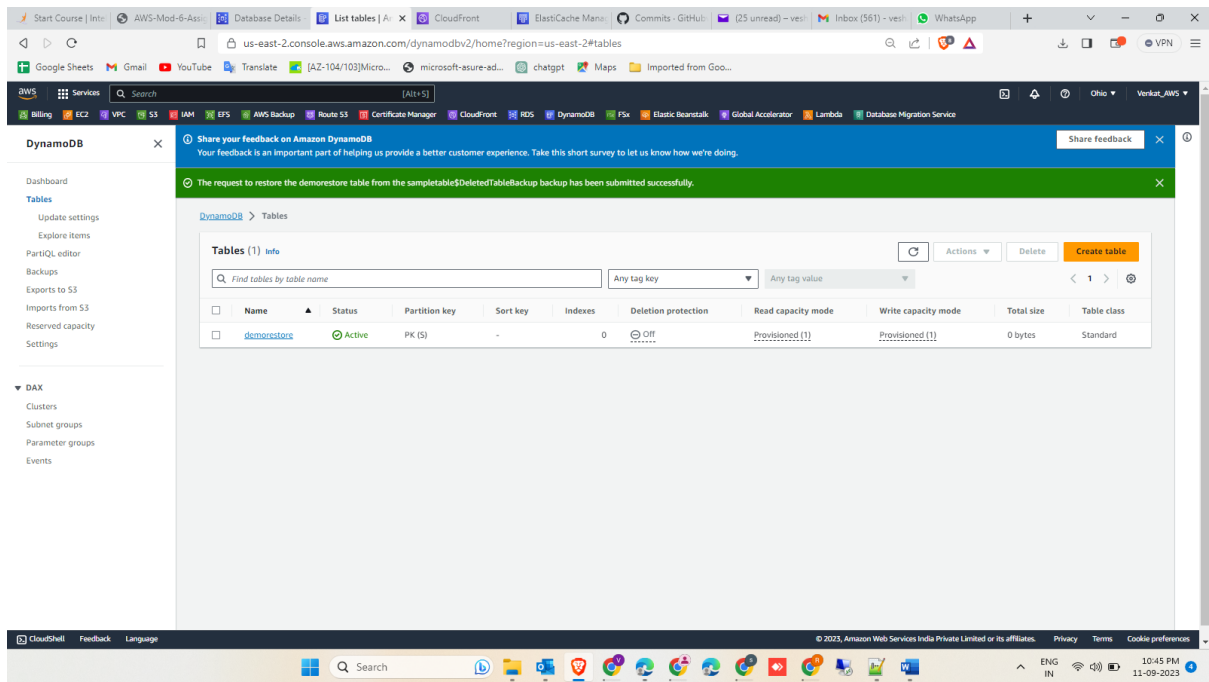

7. I have taken Backup of this table.

8. Deleted the table after backup.

9. Restored it.

10. Elastic Cache created to find and implement the solution to resolve the latency issues.
